REQUEST FOR INFORMATION ON USE OF ICPSR RESOURCES

To provide funding agencies with essential information about use of archival resources and to facilitate the exchange of information about ICPSR participants' research activities, users of ICPSR data are requested to send to ICPSR bibliographic citations for each completed manuscript or thesis abstract. Please indicate in a cover letter which data were used.

DATA DISCLAIMER

The original collector of the data, ICPSR, and the relevant funding agency bear no responsibility for uses of this collection or for interpretations or inferences based upon such uses.

SUMMARY

The purpose of this study was to investigate longitudinally the developmental antecedents of physical and sexual violence against young women, using a theoretically based multicausal model that included characteristics related to the victim, the perpetrator, and the environment. The researchers used a classic longitudinal design, replicated over two cohorts (those born in 1972 and 1973), each assessed first when 18 years old, and again when 19, 20, 21, and 22 years old. The first survey (Part 1, Female Data) collected information on the respondent's experiences of sexual assault from age 14 to the present (age 18). Other questions focused on the kind of person the respondent thought she was, how much of an influence religion had on the way she chose to spend each day, her dating behavior during high school, the number of times the respondent had used behavior such as discussing issues relatively calmly, arguing, sulking, stomping out of the room, or threatening to hit, with a romantic partner during high school, and how frequently romantic partners used these types of behavior with the respondent. Other items elicited information on the number of women the respondent knew who had been sexually victimized, whether men forced them to engage in sexual activities, the nature of the respondent's sexual experience from the time she was 14 to the present, the respondent's age when each experience occurred, if the respondent or the other person was using drugs or alcohol when it happened, if the respondent was injured, and whom the respondent told about the experience. Information was collected on sexual abuse prior to the age of 14 as well. The respondent was also asked to describe how often her parents or stepparents had administered physical blows (i.e., hitting, kicking, throwing someone down), whether someone had fondled her in a sexual way, whether a male had attempted intercourse with the respondent, the relationship between the respondent and the perpetrator, the respondent's age when the experience occurred, who the other person was, who initiated the date or paid for the food, drinks, or tickets, whether the respondent or the other person was using drugs or alcohol, the respondent's opinions about men and women in America (i.e., if the respondent agreed or disagreed that chivalrous gestures toward women on the part of men should be encouraged), whether the respondent had engaged in sexual intercourse when she did not want to because a male threatened or used some degree of physical force (twisting her arm, holding her down, etc.), and the respondent's drug and alcohol use. The subsequent surveys contained measures of sexual assault during each year of college (i.e., since the previous survey). Questions asked in subsequent surveys were similar to those in the first survey, and the responses are all included in Part 1. Questions posed to males (Part 2, Male Data) included the number of women the respondent had sexual intercourse

with, how often the respondent heard talk that speculated how a particular woman would be in bed, reasons the respondent engaged in sexual activity, number of times the respondent engaged in sexual intercourse when a woman didn't want to, and questions similar to those in Part 1 with the respondent as the perpetrator. Demographic information in Part 1 and Part 2 describes the female or the male respondent's education, race, religious preference, sexual orientation, and marital or relationship status.

KEY WORDS

dating violence, female victims, sexual assault, victimization,
violence

PURPOSE OF THE STUDY

The purpose of this study was to investigate longitudinally the developmental antecedents of physical and sexual violence against young women, using a theoretically based multicausal model that included characteristics related to the victim, the perpetrator, and the environment. The research goals of the study focused on physical violence among acquaintances, paralleling the work that had already been done on experiences with sexual coercion. The researchers were also interested in the co-occurrence of sexual and physical assault. The study fills a gap in the knowledge about violence against women by addressing the relationship between experiences of sexual and physical violence from the perspectives of victim and perpetrator. Specific goals were: (1) to explore whether and how the characteristics of the agent (perpetrator), the host (victim), and the environment (situational/contextual effects) individually and in combination affect the risk of physical victimization or its perpetration during the developmental stages of adolescence and young adulthood, and (2) to examine how the three types of factors evolve from one developmental stage to the next to predict (a) the onset of victimization or perpetration or (b) the occurrence of revictimization or re-perpetration.

METHODS

STUDY DESIGN

Data were analyzed from a National Institute of Health-funded five-year longitudinal study (1990-1995) of victimization and perpetration among college students demographically representative of undergraduate women and men in state-supported universities in the United States. The researchers used a classic longitudinal design, replicated over two cohorts (those born in 1972 and 1973), each assessed first when 18 years old, and again when 19, 20, 21, and 22 years old. The researchers worked with the university administration to gain permission to survey students in groups during the first day of student orientation, and trained student orientation leaders to administer the survey, thus making participation in the study an integral part of the student orientation activities. Students who did not attend orientation, which was not required, were contacted by phone. Before the initial survey was administered, its purpose and methods were explained and signed consent was obtained. Students also completed contact sheets for the purpose of follow-up. To ensure confidentiality and still permit the matching of surveys across time, each survey and corresponding contact sheet was assigned a randomly determined code number. Only code numbers appeared on surveys and answer sheets. Lists of codes and corresponding names were kept in a locked safe to protect the identity of participants, and access was limited to the co-investigators and the data manager. To further ensure confidentiality of the data, and to bolster students' confidence in their commitment to protecting confidentiality, the researchers obtained a federal Certificate of Confidentiality. Toward the end of each spring semester, students were contacted and asked to complete a follow-up survey during one of several sessions held at various locations around campus. Postcards were sent to remind students of the follow-up survey and to announce times and locations for the sessions. These sessions were conducted by trained undergraduate psychology majors and graduate students. Students who did not attend one of these sessions were contacted by telephone and invited to participate. They were given the option of attending a session being held on campus, or of receiving the survey via mail. This was particularly useful for students who had withdrawn from the university or who were residing out of town. All students who participated in the follow-ups received \$15 each time they participated. Students who had withdrawn from the university were also resurveyed.

SOURCES OF INFORMATION

Data were collected from personal and phone interviews, and mail-back questionnaires.

SAMPLE

The sampled university was considered representative of state colleges, the type that approximately 80 percent of all college students attend. Two incoming classes of women (1990 and 1991) were surveyed and three incoming classes of men (1990, 1991, 1992) were surveyed.

RESPONSE RATES

Part 1: Approximately 83 percent of the 1990 class and 84 percent of the 1991 class provided usable surveys. Successive retention rates for each follow-up for the 1990 sample were 88.2 percent, 83.2 percent, 83.6 percent, and 78.1 percent. A total of 47.9 percent of the original sample participated in the entire project. For the 1991 sample, successive retention rates were 90.2 percent, 83.9 percent, 77.9 percent, and 77.1 percent. Of the original sample, 45.4 percent of respondents were retained throughout the entire project. Part 2: Of the total number of incoming men of 1990, 65 percent completed the first survey. Yearly retention averaged 71 percent. Twenty-two percent of the original sample completed all five phases of the study.

1990-1995

SUMMARY OF CONTENTS

DESCRIPTION OF VARIABLES

The first survey (Part 1, Female Data) collected information on the respondent's experiences of sexual assault from age 14 to the present (age 18). Other questions focused on the kind of person the respondent thought she was, how much of an influence religion had on the way she chose to spend each day, her dating behavior during high school, the number of times the respondent had used behavior such as

discussing issues relatively calmly, arguing, sulking, stomping out of the room, or threatening to hit, with a romantic partner during high school, and how frequently romantic partners used these types of behavior with the respondent. Other items elicited information on the number of women the respondent knew who had been sexually victimized, whether men forced them to engage in sexual activities, the nature of the respondent's sexual experience from the time she was 14 to the present, the respondent's age when each experience occurred, if the respondent or the other person was using drugs or alcohol when it happened, if the respondent was injured, and whom the respondent told about the experience. Information was collected on sexual abuse prior to the age of 14 as well. The respondent was also asked to describe how often her parents or stepparents had administered physical blows (i.e., hitting, kicking, throwing someone down), whether someone had fondled her in a sexual way, whether a male had attempted intercourse with the respondent, the relationship between the respondent and the perpetrator, the respondent's age when the experience occurred, who the other person was, who initiated the date or paid for the food, drinks, or tickets, whether the respondent or the other person was using drugs or alcohol, the respondent's opinions about men and women in America (i.e., if the respondent agreed or disagreed that chivalrous gestures toward women on the part of men should be encouraged), whether the respondent had engaged in sexual intercourse when she did not want to because a male threatened or used some degree of physical force (twisting her arm, holding her down, etc.), and the respondent's drug and alcohol use. The subsequent surveys contained measures of sexual assault during each year of college (i.e., since the previous survey). Questions asked in subsequent surveys were similar to those in the first survey, and the responses are all included in Part 1. Questions posed to males (Part 2, Male Data) included the number of women the respondent had sexual intercourse with, how often the respondent heard talk that speculated how a particular woman would be in bed, reasons the respondent engaged in sexual activity, number of times the respondent engaged in sexual intercourse when a woman didn't want to, and questions similar to those in Part 1 with the respondent as the perpetrator. Demographic information in Part 1 and Part 2 describes the female or the male respondent's education, race, religious preference, sexual orientation, and marital or relationship status.

PRESENCE OF COMMON SCALES

Conflict Tactics Scale, and several Likert-type scales were used.

UNIT OF OBSERVATION

Individuals.

EXTENT OF PROCESSING

Missing data codes were standardized by the principal investigator and ICPSR. ICPSR checked for undocumented codes, produced codebooks, generated SAS and SPSS data definition statements, and reformatted the data and documentation.

EXTENT OF COLLECTION

This data collection consists of two data files, a PDF user guide, codebooks and data collection instruments in separate PDF files, and SAS and SPSS data definition statements.

DATA COLLECTION NOTES

The user guide, codebooks, and data collection instruments are provided by ICPSR as Portable Document Format (PDF) files. The PDF file format was developed by Adobe Systems Incorporated and can be accessed using PDF reader software, such as the Adobe Acrobat Reader. Information on how to obtain a copy of the Acrobat Reader is provided on the ICPSR Web site.

FINAL REPORTS AND OTHER PUBLICATIONS

The National Criminal Justice Reference Service (NCJRS) was established in 1972 by the National Institute of Justice (NIJ), of the U.S. Department of Justice, to provide research findings to criminal justice professionals and researchers. NCJRS operates specialized

clearinghouses that are staffed by information specialists who supply a range of reference, referral, and distribution services. Final reports and other publications describing research conducted on a variety of criminal justice topics are available. Publications can be obtained from NCJRS at NIJ/NCJRS, Box 6000, Rockville, MD, 20849-6000, 800-851-3420 or 301-519-5500. TTY Service for the Hearing Impaired is 877-712-9279 (toll-free) or 301-947-8374 (local). The URL for the NCJRS homepage is:

<http://www.ncjrs.org>

DATA RESOURCES PROGRAM ON THE INTERNET

The National Institute of Justice Data Resources Program (DRP) makes datasets from NIJ-funded research and evaluation projects available to the research community and sponsors research and training activities devoted to secondary data analysis. Datasets are archived by the National Archive of Criminal Justice Data (NACJD) at the Inter-university Consortium for Political and Social Research (ICPSR) at the University of Michigan.

The NACJD maintains a World Wide Web site with instructions for transferring files and sending messages. Criminal justice data funded by the Department of Justice are available via the Internet at this site at no charge to the user. NACJD may be contacted at NACJD/ICPSR, P.O. Box 1248, Ann Arbor, MI, 48106-1248, 800-999-0960 or 734-998-9825. The URL for the NACJD homepage is:
